

PHYSICAL EDUCATION 1 Physical Fitness and Wellness

COURSE HANDOUTS

Course Outcome : 1 Identify Physical Education and Components of Physical Fitness

Contents:

1. Meaning , objectives and components of physical education.
2. Meaning of physical Fitness

WHAT IS PHYSICAL EDUCATION?

Physical Education aims to contribute to the total development of the learner through participation in selected vigorous activities. It provides opportunities to acquire life long skills that are essential to his physical , mental, social and emotional development.

OBJECTIVES OF PHYSICAL EDUCATION

PHYSICAL DEVELOPMENT

The capacity of the body to engage in work and play without undue fatigue. This is achieved through regular exercises and participation in varied vigorous activities.

MENTAL DEVELOPMENT

The ability of the body to analyze body movements and skills, evaluate game situations, and make important decisions.

SOCIAL DEVELOPMENT

Learns to respect others, and practices fair play, sportsmanship, teamwork, and develops leadership.

EMOTIONAL DEVELOPMENT

Aims to acquire pleasant attitudes, desirable habits, appreciations, and values.

What is physical fitness?

It is a physical condition where an individual has the capability to do everyday tasks without a feeling of exhaustion and still has enough energy to perform extra activity of his own choice.

Importance of Physical Fitness

1. Works without becoming over fatigued.
2. Capacity to learn vigorous recreational pursuits,
3. Contributes self-confidence and poise and security.

Components of Physical Fitness

1. **Strength**– ability to perform or move against a resistance.
2. **Endurance**– ability of the body to undergo prolonged body stresses.
3. **Flexibility**–ability to bend freely or increase the range of movement at a given point
4. **Agility**– ability to move one's body in different levels and directions.
5. **Balance**– ability to assume and maintain anybody position, whether static or moving.

Course Outcome: 2. Demonstrate Conditioning Exercises.

Contents:

1. Exercises program and Phases

PHASES OF EXERCISES PROGRAM

There are phases of exercises program:

The Warm-Up

The warm-up- it is the first step in any exercises routine. The purpose is to stretch the muscles of the body to avoid possible muscle injury and to heat up the body in preparation for the vigorous exercises. Usually it takes 5 to 10 minutes depending on the person and the activity he will do.

The Common Warm-up exercises

1. Head rolling halfway clockwise and counterclockwise

Head Tilts and Rolls

Head bending sideward , forward and slightly backward

2. Shoulder Lifts and Circles

-R and L shoulder lifts

-Both shoulder lift

-R and L shoulder circle

-Both shoulders circle forward and backward

3. Side Stretches and Trimmers

4. Hamstring Stretches

5. Pedalling

6. Heels raises alternately -jog in place

7. Prancing-spring in place with high knee raise

The Work-Out

The main activity of the work-out can be in the form of aerobics, which is an exercise done over a relatively long period of time. and isotonics which are characterized by the movements of joints and extremities as the muscles contract and relax.

The Cool-Down

The cool-down activity is usually made up of walking and slow stretching that bring the pulse rate gradually back to normal.

1. Breathing exercises

2. Walking with hand shake or fingers bent and stretched

3. Slow Stretches

Course Outcome: 3 Explain the meaning and History of Gymnastics

Contents:

1. Meaning and terminologies used in gymnastics
2. History and Phases

Terms in Gymnastics

1. Arch- is a position where the body is curve like an arc of a circle, with the hip forward and the head and trunk bent backward.
2. Dismount- is a stunt used by a performer to get off the apparatus.
3. Exercise or routine- planned series of dance, locomotors, gymnastics skills and tumbling skills performed with or without music.
4. Held or static position- position holds for two seconds.
5. Mount- is stunts performed by a performer to go up on an apparatus.
6. Press- in the application of steady pressure to a particular muscle or group of muscle in order to attain a desired stretch.

7. Scale- is support on one leg with the other leg raised at the back and the body is arch.
8. Split- is a position where the legs are extending forward and backward in a straight position.
9. Spotting- is the act of helping a person to go about a skill for the first time.
10. Spotter- is a person who helps a performer goes about a skill for the first time.
11. Tuck- is a position where the head and the knees are in contact and trunk is curve.

BODY MOVEMENT SKILLS

Movement skills are fundamental movements that can modify into specialized patterns. Once these basic skills is learned to a certain degree of proficiency, they can be combined with other skills used in more complex settings, such are those found in sports, dance, games, and gymnastics.

BODY MOVEMENTS

There are two types of body movements:

- A. Axial Movements- are movements by part or several parts of the body in stationary place.
 1. Bend or flex- to move part of the body around a wide axis.
 2. lift, raise- to elevate a part of the body or the whole body to a desired level.
 3. stretch, extend, straighten- to lengthen a part of the body.
 4. twist- to move a body around a long axis
 5. circle- to move a body around a point.
 6. swing- to move continuously from one point to other.
 7. Turn; rotate- to change direction to move around an axis
- B. Locomotors Movements- movements that brings the performer from one place to the other.
 1. Point - to touch the floor with toes, the knees well extended.
 2. Step - to transfer weight from one foot to the other.
 3. Place- to touch the floor with the whole of the foot with slight

body weight on it.

4. Spring- to push off the leg or legs in the air. It is a combination of a bend on the knees and leg stretch.

WHAT ARE GYMNASTICS?

GYMNASTICS

Gymnastics is a sport involving the performance of sequences of movements requiring physical strength, flexibility, balance, endurance, gracefulness, and kinesthetic awareness, such as handsprings, handstands, split leaps, aerials and cartwheels.

History of Gymnastics

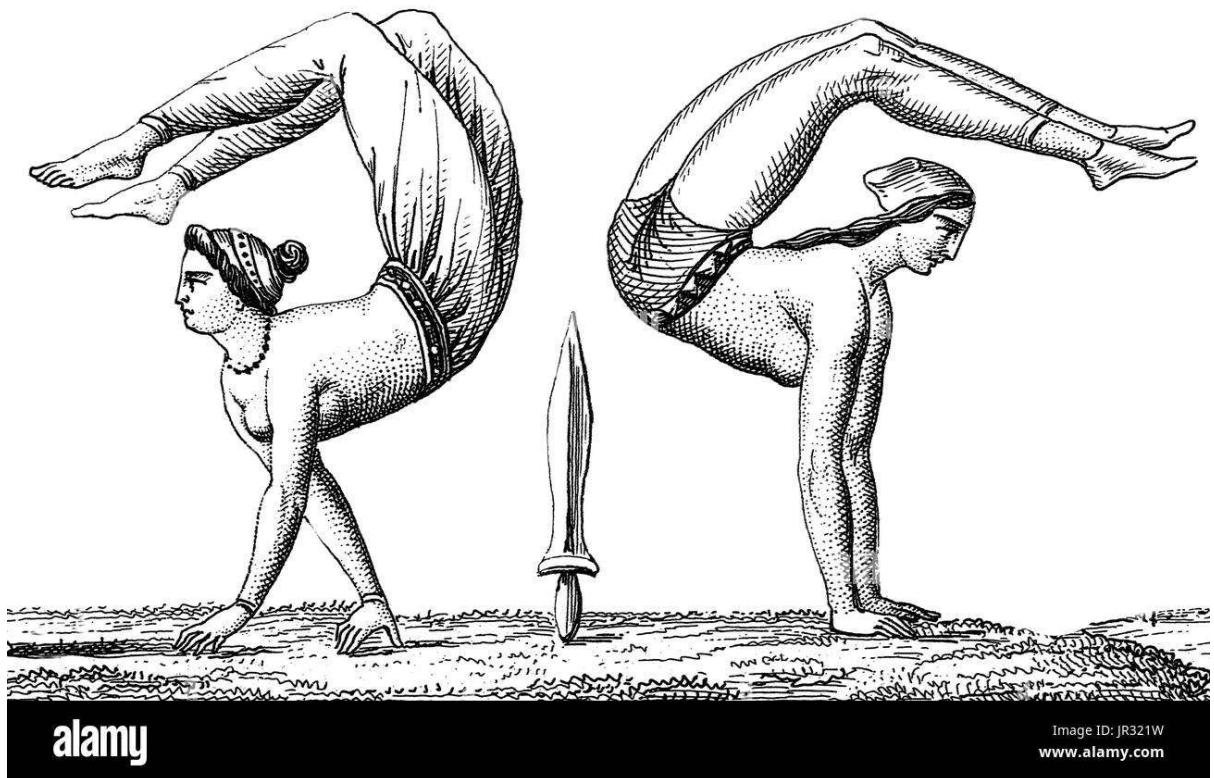

Hanging, climbing ropes, swinging, balancing on stones and logs, flipping, and turning were common activities during the early civilizations.

The Chinese had a sort of exercise called the "Kung Fu" or Medical Gymnastics.

MIND OVER MATTER Shaolin monks training, Zhengzhou, China. The ...

Indian Catholic church says Christians shouldn't do yoga India had the "Yoga"

The Greeks had activities with apparatuses and they developed the word "gymnastics", which meant "Naked Arts"

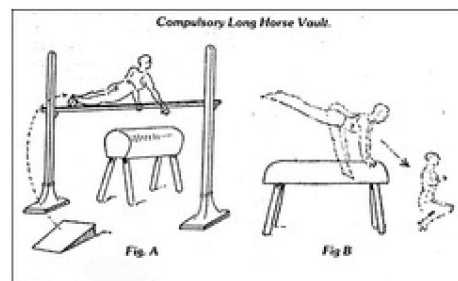

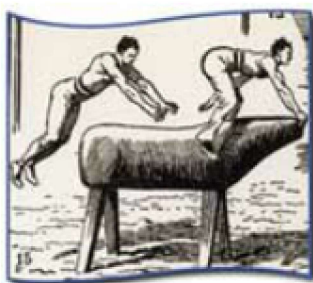

Ancient Greek Gymnastics Stock Photo – Alamy

Ancient Egypt Dance | Dancing in ancient Egypt – Ask Aladdin

The pictures on stones found in Egypt are evidences of the Egyptian participation in some sort of balancing activities. The pyramids were inspirations of the pyramid activities in gymnastics.

The Roman devised a wooden equipment similar to the back of a horse where they could practice mounting and dismounting a horse indoor. The equipment is now being used in one of the events in the competitive gymnastics.

Phases of Gymnastics Program

Phases of Gymnastics

Conditioning Program- are exercises selected for the purpose of preparing body for more complicated movements and skills.. It is also considered as "Calisthenics".

Rhythmic Gymnastics- are routines or exercises accompanied with music.

Stunts- are activities in the form of play and they tests one's strength, flexibility, balance, agility, endurance and coordination.

Tumbling- it is the ability of the performer is tested as he rolls to and fro, twists, turns and springs about on the mat, floor and in the air.

Apparatus Exercise (Heavy)- this includes exercises done on the balance beam, vaulting horse, parallel bars, rings and the trampoline.

Pyramid building- it makes mural out of body static positions. The positions should be properly arranged and selected so that they form the shape of a pyramid.

A very majestic style of pyramid looked fantastic and was a great team building exercise. | Team building exercises, Crans-montana, Great team

Basic Positions in GYmnastics

A. Standing Position

1. Feet together or Feet Parallel: The feet are about One(1) inch apart toes pointing forward. Arms at the sides
2. Stride Position
The feet are apart About 12 inches wide
The stride may be made Wider than 12 inches
The weight of the body Is on both feet and
The trunk is at the center. Arms at sides.

Sitting Positions

- 1., *Long Sitting Positions*
- 2.. *Long Sitting Rest Positions*
3. *Hook Sitting Positions*

4. ***Tuck Sitting Position***

Sit on buttocks, bend knees close to body; round back so that the forehead and the knees are in contact; hold shin of legs.

5. ***Stride Sitting Position***

Sitting on buttocks, spread legs apart, trunk erect, hands on thighs.

6. ***Side Sitting Position***

Sitting on buttocks, bend right or left leg in front; other leg extended sideward. Hands on knees.

7. ***Hurdle Sitting Position***

Sitting on buttocks, bend right leg at the back about 90° angle, the other leg extended diagonally forward.

8. ***Heels Sit***

From kneeling position, sit on the heels of the feet, toes pointed. Hands on hips.

9. ***Cross Sitting***

10. ***Frog Sitting or Tailor Sitting***

C. ***Kneeling Positions***

1. ***Kneeling Position***

Kneel on both knees, knees close together, body erect, hands on hips.

2. ***Stride Kneeling Position***

Kneeling on both knees, with knees apart.

3. ***Half-kneeling Position Right or Left***

Kneeling on right, left in half-kneeling position in front. Hands on hips.

4. ***Kneeling Position One Leg***

Extended Sideward

Kneeling on one leg, the other extended sideward, forward or backward.

D. ***Lying Positions***

1. ***Back or Supine Lying Position***

Lying on the back, the body is well extended, arms overhead, toes pointed.

2. ***Front or Prone Lying Position***

Body is well extended and in front of the body in contact with the floor. Toes pointed, arms forward.

3. ***Side Lying Position***

With the body well extended, the side of the body is in contact with the floor, one hand on the floor overhead and other hand bent close to chest palms on floor. Toes pointed.

4. ***Hook Lying Position***

In a back lying position, bend knees, with the feet close to buttocks, feet flat on the floor. Arms overhead.

5. ***Tuck Lying Position***

Lying on the back, pull the knees close to the forehead, hold shin of legs.

E. ***Arm Support Positions***

1. ***Supine or Back Arm Support***

From a long lying position, lift the body with straight arms support. Body, legs and toes well extended and one straight line.

2. ***Prone or Front Arm Support***

From a front lying position, lift the body to front arms support; body, legs and toes well extended and in one straight line.

3. ***Side Arm Support***

The body is supported with the right or left arm; the body is well extended.

F. ***Four-Base Positions***

1. ***Dog Stand Position***

From a kneeling position, place the hands on the floor, elbows straight, toes pointed; the knees and hands are the base of support.

2. ***Bridge Stand Positions***

From a hook sitting lift the trunk; legs and arms in right angle with the trunk.

G. ***Hand Positions***

1. ***Hands on Waist***

Place hands on waist, fingers pointing front thumbs pointing backward.

2. ***Hands on Chest***

Palms facing down, thumbs touching the chest, elbows in line with the shoulders.

3. ***Hands on Shoulders***

Bend arms from the elbow, finger tips touching the shoulders, elbow in line with the shoulders, rib cage lifted.

4. ***Hands on Neck***

Bend arms from the elbows, place hands behind the neck, finger tips meeting each other, elbows in line with the shoulders.

5. ***Hands on Hips***

Place hands on hips, thumbs pointing back and fingers pointing front.

H. ***Arm Positions***

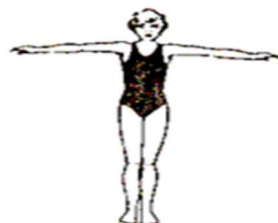

1. ***Arms Forward***

Raise arms forward with palms facing each other. Hands in line with the shoulders, elbows slightly extended.

2. ***Arms Sideward***

Raise arms sideward, palms facing down, finger tips in line with the shoulder.

3. ***Arms Upward***

Raise arms upward, palms facing each other, elbows touching the ears, the whole arm in line with the body.

4. *Arms Oblique Positions*

Contents:

1. Rhythmic gymnastics using light apparatuses

What is Rhythmic Gymnastics?

Rhythmic Gymnastics

these are exercises accompanied with rhythm or music using light apparatuses such as balls, ropes, wands, hoops , dumbbells, scarfs , etc.

Music

The music to be used should not be too slow. Classes music, folk music, pop or any kind of accompaniment suited to the movements may be used.

Formations

There are different type of formations can be used in presenting gymnastic exercises. It is advisable to change formation after every figures.

1. Mass Formation
2. Circle Formation
3. Square Formation
4. Star-Formation
5. T-Formation
6. V-Formation
7. H. Formation
8. Diagonal Formation

Types of Rhythmic Gymnastics Formations

Formations

Different types of formations can be used when presenting gymnastic exercises. It is advisable to change formation after every three figures.

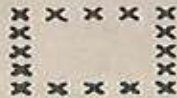

The following formations are recommended:

1) Mass – Formation

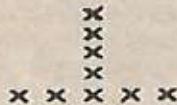

2) Circle – Formation

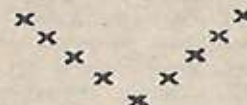

3) Square – Formation

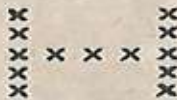

4) Star – Formation

5) T – Formation

6) V – Formation

7) H – Formation

8) Diagonal – Formation

Dumbbell Exercises

How to Hold the Bell

Grasp the neck of the dumbbell between the thumb and the other fingers, the knuckles out.

Basic Positions

Bells to Position

Bells Forward

Bells Upward

Bells Backward

Bells on Chest

Bells on Shoulders

Bells Oblique
Upward at Side

Bells Oblique
Down at Side

Bells on Waist
and Hips

Chest. Knuckles
facing front

Click Bells
Upward. Knuckles
facing back

Click Bells
forward, knuckles
up.

Click Bells in Low waist
Knuckles facing front

Click Bells down in rear
knuckles facing front

Movements with the Dumbbells

Standing Arch Back

Forward Trunk Bend

Course Outcome: 5 Participate and Develop Activities Providing Recreation and Physical Condition.

Contents:

1. Stunts

Stunts

What is Stunts?

Stunts are activities in the form of play that test one's self on flexibility, agility, balance, coordination, strength and endurance.

Stunts can also be activities that serve as conditioning exercises and can also be introductions to some gymnastics skills and tumbling skills.

Types of Stunts

Individual Stunts–these are stunts performed by only one person.

Individual & Dual Stunts - YouTube

2. Dual Stunts- are stunts performed by 2

Dual Stunts - YouTube

3. Group Stunts- are stunts performed by three or more persons.

Different Stunts (individual, dual and group) - YouTube

4. Combative Stunts- are stunts where two performers or more, fight each other showing strength, balance, agility and endurance.

Balance Combative Head Tapping – YouTube
